

# The Ad Hoc Solution

The Ad Hoc Communication Solution, a new generation of communication technology, requires only a single frequency to build a local, a municipal or even a provincial communication network. The Ad Hoc solution applies wireless-relay mode for expansion, which is in no need of switches, wired links, or 4G/ satellite links. You will find it surprisingly simple and reliable by applying this Ad Hoc solution.

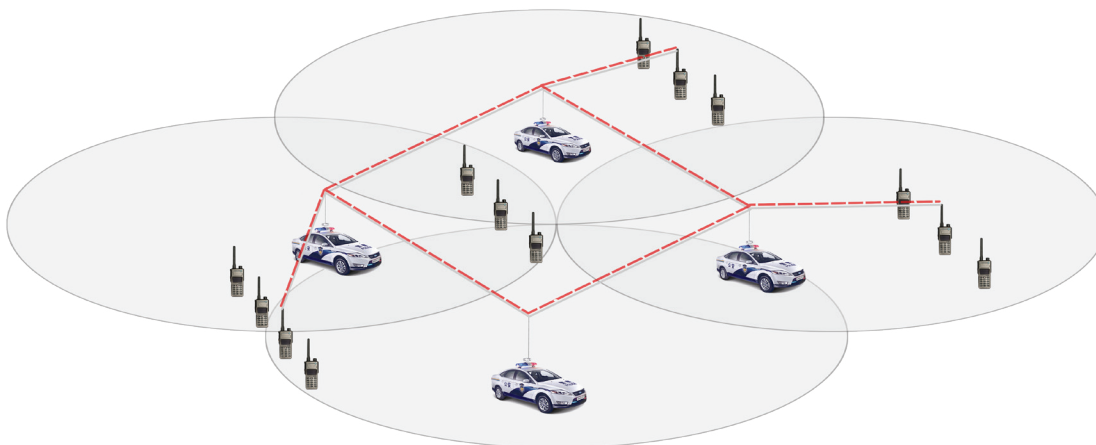

Single  
Frequency

Ad Hoc  
Communication Solution

Self Reliant  
Solution

## LAN Networking

With more than 3 Ad Hoc repeater, it is convenient to build an Ad Hoc network rapidly on site. There is no fixed ranking among the repeaters, the linking will be accomplished automatically.

## WAN Networking

With the purpose of a wide area coverage, the repeater must be placed on the top of the a building or the peak of a hill. The mobile Ad Hoc repeater can improve the coverage or potentially eliminate the blind spots. It can enhance the comunicaton among the user in the field.
